

**Name:** T. Nikhil Kumar Reddy

**Reg-No:** 192372024

19. Design a C program to implement process synchronization using mutex locks.

**Aim:**

The aim of this C program is to demonstrate process synchronization using mutex locks, ensuring that multiple processes do not interfere with each other when accessing shared resources.

**Algorithm:**

1. Create a mutex lock.
2. Initialize shared resources.
3. Define the critical section.
4. Use `pthread_mutex_lock()` to lock the mutex before accessing the shared resource.
5. Use `pthread_mutex_unlock()` to unlock the mutex after accessing the shared resource.
6. Perform synchronization to avoid race conditions.

**Procedure:**

1. Create multiple threads (representing processes).
2. Each thread will access a shared resource (e.g., incrementing a counter).
3. Mutex locks will ensure only one thread modifies the resource at a time.

**Code:**

```
#include <stdio.h>
```

```
#include <pthread.h>
```

```
pthread_mutex_t mutex;
```

```
int shared_resource = 0;
```

```
void* increment(void* arg) {
```

```
    pthread_mutex_lock(&mutex);
```

```
    shared_resource++;
```

```

    printf("Shared resource: %d\n", shared_resource);

    pthread_mutex_unlock(&mutex);

    return NULL;
}

int main() {

    pthread_t threads[5];

    pthread_mutex_init(&mutex, NULL);

    for (int i = 0; i < 5; i++) {

        pthread_create(&threads[i], NULL, increment, NULL);

    }

    for (int i = 0; i < 5; i++) {

        pthread_join(threads[i], NULL);

    }

    pthread_mutex_destroy(&mutex);

    return 0;

}

```

## **Result:**

The program creates five threads, each incrementing the shared resource. The mutex ensures that only one thread can modify the resource at a time, avoiding race conditions and ensuring that the final value of `shared_resource` is 5.

## Output:

The screenshot displays the OnlineGDB web interface. On the left is a blue sidebar with the OnlineGDB logo and navigation links: 'Welcome, NIKHIL KUMAR REDDY T', 'Create New Project', 'My Projects', 'Classroom new', 'Learn Programming', 'Programming Questions', 'Upgrade', and 'Logout'. The main area on the right shows a code editor with 'main.c' selected and 'employees.dat' as a data file. Below the editor is a black console window with green text output. The output shows five lines of 'Shared resource: 1' through '5', followed by a completion message and a prompt to press ENTER.

```
main.c employees.dat
Shared resource: 1
Shared resource: 2
Shared resource: 3
Shared resource: 4
Shared resource: 5
...Program finished with exit code 0
Press ENTER to exit console.
```
